BETTER CUSTOMER SATISFACTION

MORE PROFITABLE NURSERY BUSINESS

Plantect makes early and late season plantings more successful.

Plantect enables large trees and shrubs to stand transplanting shock better.

Plantect makes better sales by keeping stock on display more attractive and healthy.

Plantect saves seedlings, rooted cuttings and grafts in transplanting.

Plantect protects against dry out and browning in winter.

Sprayed with
Plantect

Transplanted same
time but not sprayed

So easy to use: simply pour into sprayer, add water and spray.

Observe these few simple rules: Keep from freezing, avoid hard well water in mixing, wash sprayer carefully after use. One part Plantect to 4 parts water is usually best. Weaker mixtures may also be used.

Always Keep Plantect on Hand — Ready for Instant Use!

PROTECTS PLANTS

Containing Goodite VL-600 produced by
B. F. Goodrich Chemical Co.

STOPS WINTER BURN

Retards evaporation from leaves while transplants are establishing new roots. Minimizes wilting and resulting setback to plant growth.

- Retards winter burn
- Will not harm plant tissues
- Long-lasting, forms transparent film
- Reduces water loss through foliage
- Can be used as a spray or a dip
- Permits transplanting any time of year
- Actually enhances appearance
- Almost invisible
- Has no toxic effect
- Simple and convenient to use

PLANTECT can be applied any time when atmospheric conditions will allow it to dry fairly rapidly. When PLANTECT is dry, it is transparent. Temperatures of 70° or higher are ideal but satisfactory results can be obtained at much lower temperatures. When PLANTECT is used indoors, drying can be hastened by artificial heat and the use of fans.

HOW TO APPLY — PLANTECT can be sprayed or dipped, whichever is most convenient. Use any type of pressure sprayer. Care should be taken to get complete coverage.

For transplanting evergreens — Use one part PLANTECT to 4 parts water.

For transplanting deciduous shrubs and trees — One part PLANTECT to 6 parts water.

For rooted cuttings from greenhouse and beds — One part PLANTECT to 8 parts water.

For deciduous stock for storage — One part PLANTECT to 1 or 2 quarts water.

CAUTION: Clean sprayers carefully with water after using PLANTECT. Spray equipment, especially hose, pipes and nozzles, are likely to clog if not flushed out with water at least once daily. PLANTECT should never be left in sprayer over night.

SELF-SERVICE IN THE SALESGROUND

Your own customers have learned to like waiting on themselves to save money, in Supermarkets, would like the same privilege in more Super-Nurseries. have more soon! Inquiries, requests, for Self-Service Carts are in from Nurseries all over the Country. (Many will have converted to Self-Service by February, 1956.) To help you meet this challenge, here are

TWO MODELS — SALESGROUND SHOPPING CARTS

MODEL A-L is offered to meet the need of many Nurseries for numerous small carts. Customers wanting to buy only 4 or 5 plants-in-cans (or other containers) should not have to wait for a cart—nor 'tie-up' a big cart.

This model folds up to save space in winter storage. Six carts fold into space used by one only open cart. Baskets for small items (hand tools, seed packets, bulbs, etc.) will be available for this cart if requested at extra cost. Cardboard boxes, if kept handy to the carts, would serve as well for small item pick-up, and would be necessary for customer's pick-up of Bedding Plants!

MODEL A-L is as nearly like market shopping carts as a carrier for Nursery items can be. It's light and easy to handle—will induce customers to wait on themselves.

This model is best choice for Nurseries with narrow walks—little parking space. Or for large Nurseries which have a short but heavy selling season—then must store their carts the rest of the year.

5 carts nest in a space 7 ft. x 2 ft.

5 carts fold for storage in a space 24x40x30" high.

Model E-B has been in Nursery Self-Service since September, 1953, Designed by Gordon Courtright of East Day Nursery, Berkeley—manufactured by Ayer-Line since January, 1954. Many units now in use, are proving that Self-Service can be just as practical for the Nursery, in this day of packaged living plants, as it is for food stores.

The MONROE NURSERY has recently been appointed as sales agent—and is proud to offer this fine cart to its customers. It can't be beat for easy rolling of heavy loads! Many owners 'borrow' it from Self-Service sections of their Nurseries—to tote large heavy items. Its basket is now made removable, to clear entire bed surface, for this use.

MODEL E-B is built to take rough handling, for years, and to carry heavy loads. This model is best choice for Nurseries having plenty of space, both for parking carts, and in aisles, for carts to pass each other. Also best model for a Nurseryman's own use — it will tote very heavy items.

PLANT NUTRITION AND SOIL IMPROVEMENT

IT IS WELL KNOWN that the average acre of nursery stock must produce from ten to twenty times the cash return expected of an acre of average farm crops. Of first importance in realizing these returns is intelligent soil management and efficient use of fertilizers.

THE RESPONSE OF CROPS AND SOILS TO FERTILIZERS AND MANURES

W. B. Andrews

The compilations of many years of experience are concisely presented in this valuable book. All types of fertilizers, manures and plant food elements are considered, practical example of their uses are given, and carefully prepared conclusions are offered. Easily understood, practical and interesting to read; this book contains essential information on soil and crop improvement for the grower.
